

Automation Platform V1.5

Urgent care

■ The emergency department is a challenging and stressful environment where every minute counts. Emergency department physicians are required to conduct numerous essential tasks to ensure that all admitted patients receive adequate emergency care.

We are aware that an imbalance between workload and resources is highly growing, and you suffer from an excess workload and staff shortage. In this tense environment, there are significant levels of misunderstanding between senior and junior staff and an urgent need for standardization.

In a modern world, you have an overwhelming choice of technological platforms and AI-powered solutions. Choosing the best one without wasting your time may be challenging.

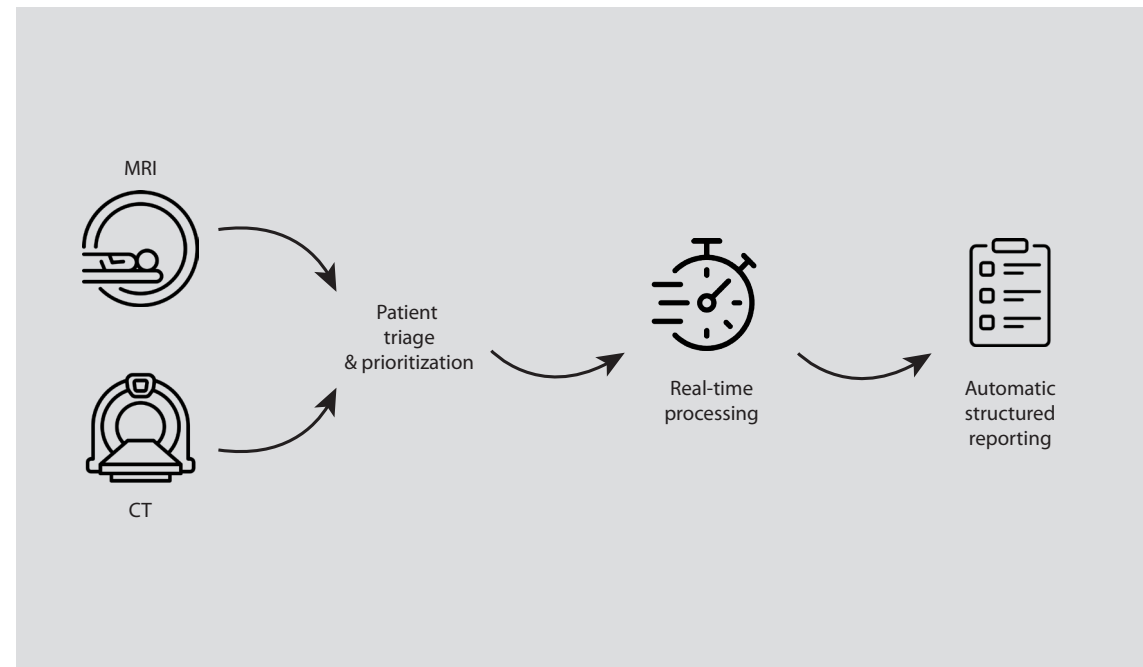

Here are three determining factors that will positively change your way of working in emergency department:

- **Optimized workload and faster turnaround**
- **Standardization**
- **One environment and one contact person for any request**

All these items are embedded in our all-in-one Automation Platform V1.5. We offer a new model of patient-flow dynamics with Automation Platform V1.5 recognized by its significant speed, stability, and efficiency. As you have no time to lose, clinical cases are prioritized and triaged in a timely manner. The automatic report is instantly sent to a preferred radiologist's working device (mobile, e-mail, PACS). Real-time processing considerably helps accelerating routine activities and improves the workflow.

By choosing Automation Platform V1.5, you are investing in a powerful multi-vendor and multi-modality solution that can receive images from different PACS or modalities, tremendously improving your workflow.

Reliable AI-driven solutions include comprehensive neurovascular solutions for both CT and MRI, and automated detection of PE (Pulmonary Embolism) and AD (Aortic Dissection) in CTA. The results populated in a report ensure the smooth experience for the physicians and technologists whatever their expertise level.

While our automated state-of-the-art algorithms and AI tools improve confidence in the quality of your analysis, adjustable parameters and accessibility to raw images assure you to always keep control on the final decision.

With our new platform there is no need to scramble for information, searching for a specific solution or feature. Thanks to Automation Platform V1.5, you will manage patient workflow with less stress within a unique intuitive interface.

One of the greatest strengths of Automation Platform V1.5 is the people working on it. When you partner with Olea Medical®, you have access to an experienced, innovative team with various expertise. We are highly invested in your success and ready to provide you with both clinical and technological support. A dedicated contact person will provide you with on-demand personalized training and will answer all your questions.

DEEP DIVE IN THE FEATURES...

Auto **Neurovascular**

The ^{Auto}Neurovascular solution aims to optimize the hospital workflow through a complete package for acute neurovascular exams. Efficient for both CT and MR scanners, it allows clinicians to use the first available modality without wasting any time. Provides information that may be used by trained specialists for screening, or to support the interpretation process and interventional planning, in conjunction with other patient information.

MRI

DWI-FLAIR

Extraction and calculation of hypointense zones identified on ADC maps and projected on FLAIR maps, as well as contralateral ratios.

DWI-PWI

Mismatch between diffusion and perfusion to generate multiparametric maps.

MULTIPARAMETRIC COLLATERALS STATUS

Assists trained radiologists and surgeons in the imaging assessment workflow by extraction and communication of key volumes of interest and indexes.

CT

LVO

Designed to detect LVO of the anterior circulation.

ASPECTS

Heat map indicating the probability of hypodensity and/or sulcal effacement in the brain.

OLEA CASO 11 Results Overview

Patient ID: Accession Number

Age: 80 Gender:

RESULTS

- ICH application successfully executed
- Suspected LVO Identified
- ASPECTS: 7/10 Region(s): C, M1, M6
- CTP Mismatch ratio: 2.9 Volume 1: 24 ml Volume 2: 157 ml
- Side Of Interest: LEFT

CTA Suspected LVO Location

NCCT ASPECT Score 7/10 Acute Ischemic Region(s): Left C, M1, M6

CTA Volume 1: 54 ml Volume 2: 157 ml

CTP view

BACK TO CT OVERVIEW (OLEA CASO 11) ASPECTS Export olesupport

NCCT ASPECT Score 7/10 Acute Ischemic Region(s): Left C, M1, M6

Legend:

- Areas of suspected low attenuation and/or sulcal effacement are shown in transparent red overlay
- Anatomic ASPECTS regions identified as normal are outlined in green
- Anatomic ASPECTS regions identified as infarct are outlined in red: Left Caudate, M1, M6

Automatically generated ASPECT Score 7/10

Hounsfield Units Mean	
Right	Left
C 35.3	C 33.5
IC 32.8	IC 31.7
I 31.9	I 29.8
L 36.1	L 33.4
M1 32.7	M1 31.5
M2 32.5	M2 29.4
M3 36.8	M3 33.1
M4 30.9	M4 31.9
M5 32.7	M5 32.2
M6 35.4	M6 32.9
10 / 10	7 / 10

Non-compliant image acquisition protocol: Aqi

Informational purposes only. Not for diagnostic use

ICH

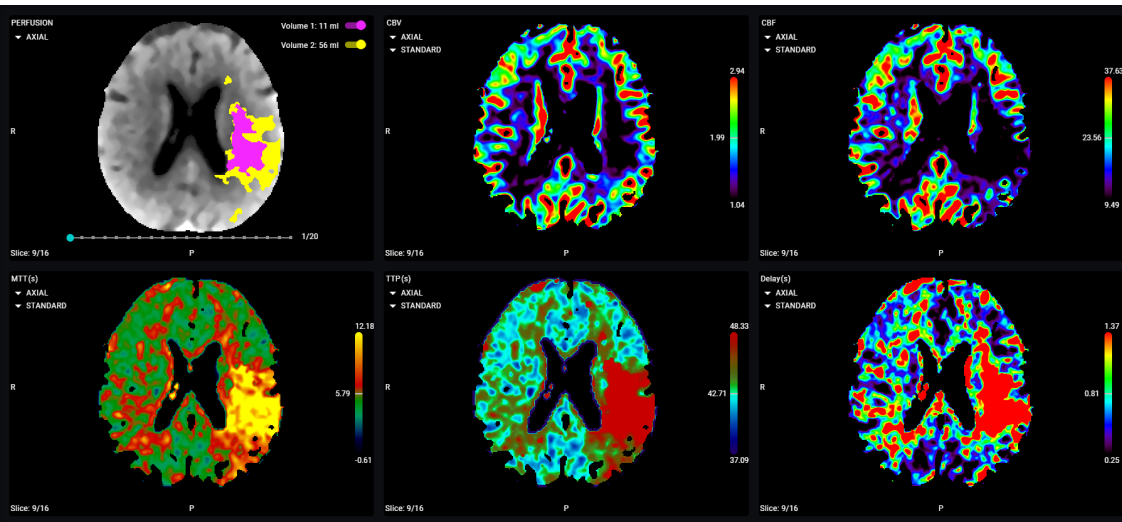

Uses deep learning to identify suspected intracranial hemorrhage.

CT

CTP

Tool for automatic computation of parametric maps from CT Perfusion data and extraction of volumes of interest according to numerical thresholds applied to the maps. The mismatch calculation between extracted volumes is automatically provided.

MULTIPARAMETRIC COLLATERALS STATUS

Assists trained radiologists and surgeons in the imaging assessment workflow by extraction and communication of key volumes of interest and indexes.

AutoNeurovascular

includes the following applications :

- MR Diffusion Perfusion Mismatch v1.0
- MR DWI/FLAIR Measurement V1.0
- CT Perfusion V1.0
- Olea S.I.A Neurovascular V1.0 (CT and MR)
- Perfusion collaterals MR & CT V1.0
- CINA-ICH®
- CINA-LVO®
- CINA ASPECTS

*Auto***Chest pain**

Designed with a focus on patient management, *Auto*Chest pain includes a suite of advanced algorithms and AI tools to accelerate and improve the decision-making process. It helps healthcare professionals to detect and prioritize life-threatening conditions after CT scan examination.

CTA triage and prioritization

PE

Radiological computer-aided triage and notification software indicated for use in the analysis of chest and thoraco-abdominal CT angiography.

AD

Identify acute Type A and B aortic dissection that requires urgent intervention on Chest CT Angiography to flag and triage urgent AD cases.

AutoChest pain includes the following applications:

- CINA CHEST - PE
- CINA CHEST - AD

NAME	EMERGENCY
